

Attention Magoffin County Water Customers

Due to changes in the Lead line and copper rules because of the events in Flint, Michigan. We, and all other water companies in the United States, are being required by the U.S Environmental Protection Agency to Inventory all Service lines in our system. That includes the service lines on the customer owned side from meter to home.

Linked to this post is a QR code that will directly take you to the survey in which you can fill out and identify your personal service lines. If unable to use a QR code, you can find it on our website www.magoffincountywater.com. Paper Copies of this post with the QR code will be mailed with your water bills over the following months also.
